

# Auto Call Home Hosting

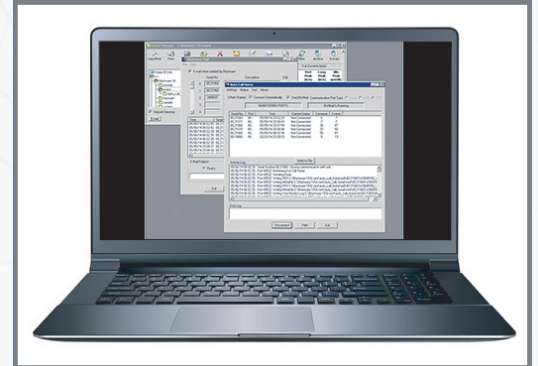

## Service Overview

Specto Technology offers an Auto Call Home (ACH) hosting service that takes the headache out of automated data transmission from Inстанtel seismographs. There is no need for you to provide a dedicated PC, Internet link nor mail server. Data is collected at our server and pushed to the Cloud for customers to access.

### Auto Call Home (ACH)

This feature of Inстанtel's Blastware software allows a seismograph to connect to a host PC remotely, automatically and wirelessly over the Internet via a cellular modem at specific times of the day and whenever a trigger threshold is exceeded.

At each connection, data will be sent to the PC and reports in graphical and tabular formats will be generated in real-time.

### Blastware Mail (BM)

This feature allows reports to be distributed via email to a predetermined group of recipients, every time data is automatically sent from the seismograph.

## Service Features

- We supply computer hardware
- We provide continuous internet connection
- We provide Mail Server for Blastware Mail
- We set up Blastware Mail feature for email alert and reports via email
- Automated transfer of data and reports to cloud-based data storage
- Monthly rate includes hosting, ftp access and start up support
- Web based data presentation available (eagle.io), ability to customize reports and alerts
