

AMTS Software Hosting

Product Overview

Specto Technology is proud to offer our customers GeoExplorer - a fully hosted and supported software solution that allows users to control their Automated Motorized Total Stations (AMTS) devices remotely, without needing to purchase, learn, install or maintain costly software.

Hosted in the cloud, the software has the ability to control Leica, Topcon or Sokkia total stations. Project set-up is simple but experienced professionals are on-hand to guide users through each step, if required.

Once the system is up and running, data may be pushed automatically to the eagle.io software to enable real-time display of data on the web.

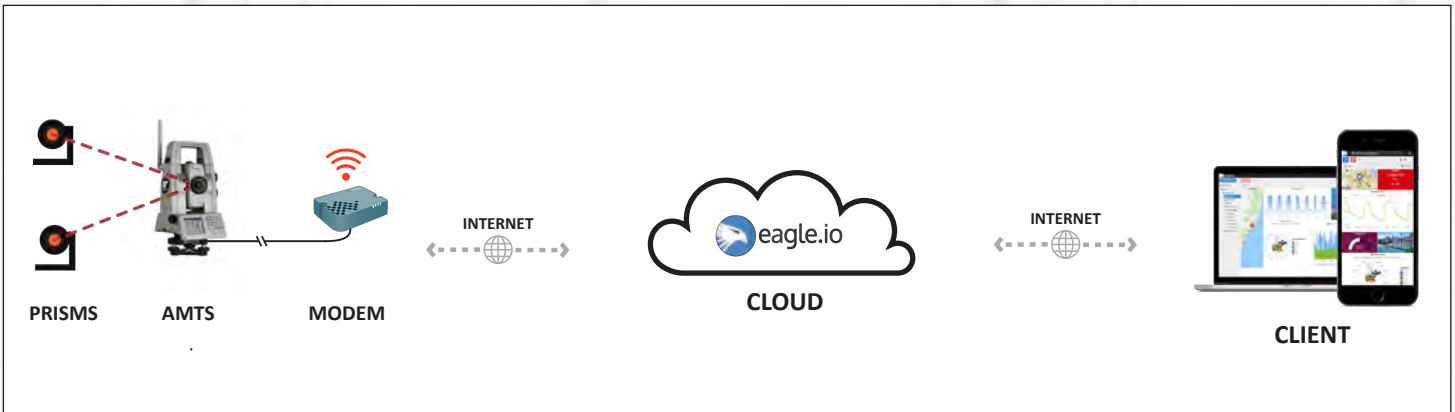

Service Features

- Server hardware supplied
- Continuous internet connection supplied
- Ability to manage any number of AMTS units
- Monthly rate includes hosting, configuration & support
- Web based data presentation available (eagle.io), ability to customize reports and alerts

Benefits

- Extremely simple to learn and operate
- No need to learn complex desktop software
- Technical support readily available, if required
- No need to purchase software license
- Secure hosting in the cloud
