DATASHEET

## Product Overview

Eagle.io is a scalable cloud hosted solution that eliminates IT costs and complexity within your field. This innovative cloud-based product allows you to configure and manage your data network from anywhere. Empower field teams with instant answers and supercharge the way you secure and share your data with others. Take control of who can access, configure and administer your network or subscribe to notifications when things change. With Eagle.io, you can transform your time-series data into beautifully presented, actionable information.

## Features

- Asset management
- Subscribe to alarms with a single click and alert teams of critical events
- Create a custom dashboard in seconds and choose only the data points you want to see and utilize your data for easy team collaboration
- Live image updates
- GPS tracking
- Support for industry standard data loggers
- Powerful charting and tabular display
- Import/export data with ease and integrate with existing software systems using the powerful HTTP API
- Drag and drop straight onto the map and watch values update in real-time
- Schedule downloads and processing while working with industry standard data loggers

## Application Examples

- Acquire data in real-time from any data logger or text file, receive alerts for critical events, and share access with recipients
- End-to-end data management for integrators
- Manage a portfolio of clients from one interface using your brand
- Network-wide device management

## Benefits

- Communicate with your fleet of devices directly or use Eagle.io's configurable parser to acquire any form of text data via HTTP/FTP/Email or Dropbox
- Subscribed users receive instant notifications via SMS or email as alarm states are detected
- Cloud-based platform that negates the need for software installation and licenses to manage
- Easy access, anywhere; on any device
- Share secured data from anywhere, with the right people
- Create a unique presence for your company with Eagle.io's customization and branding features
